

Brandon Blanker Lim-it

General Trias, Cavite | flamendless8@gmail.com | +639455796250 | flamendless.github.io
linkedin.com/in/flamendless | github.com/flamendless

Programmer with wide range of knowledge and understanding of programming languages, technology, and engineering. Passionate with implementing **technical, simple, robust, efficient, and optimized code**.

Education

Cavite State University - Main Campus, BS in Information Technology 2017 - 2021

- Magna Cum Laude (GPA: 1.32)
- **Thesis:** CodeNect: Visual Programming Software for Learning Programming Fundamentals

Experience

Software Engineer, SM Malls Online Sept. 2023 - Present

- Spearheaded the use of Go via microservice development and tech clinic for the backend technology over Python.
- Sole backend lead and developer for ParkMate.
- Developed GCash and SMO integrations, Multi-system secure connections, Unit and Integrations Tests, Audit Logs, Webhooks, and more.
- Implemented our very own custom database migration system in Python for MongoDB from scratch.
- Consistently maintained Gold Quality for Snyk and SonarQube with passing code coverage.
- Consistently optimized backend code without any bottleneck or slowdown issue in Production.
- Optimized ParkMate CI/CD that reduced the duration and cost.
- Assisted in the development of POS (Point of Sale) system by implementing core features such as Training Mode, Database Cloud Backup, Reset Counters, and more.
- Led and developed multiple initiatives for the OneBE such as Improved Backend Technical Interview Process, Better Branching, and Code Review Standards.
- Maintained the code quality of Core Backend by reviewing all Pull Requests (PRs).
- Guided and led a group of three Backend Developers in different projects.
- Started OneBE Tech Clinic and taught "Understanding Optimization and Efficient Coding, the Computer Science Way".

Associate Software Engineer, SM Malls Online Dec. 2021 - Sept. 2023

- Developed a POC for showcasing and benchmarking the effectiveness and performance benefits of using Go vs Python for backend.
- Developed multiple features for the Core Backend such as Better Delivery Service, ShopSM Shopify Integration, No Malls, Out-of-stock Push Down, Auto Release Notes/Changelogs Generator, Search Improvements, and Nationwide Delivery.
- Spearheaded Python annotations/typing to codebases as part of standard coding.
- Led multiple optimization and refactoring solutions for the Core Backend such as the checkout to order process and significantly reduced N+1 database queries.
- Developed cleanup jobs for unused and old data for Core Backend.
- Integrated codebase with custom GraphQL to HTTP Specs for logs for DataDog integration.
- Taught "Clean Code", "FastAPI", and "Python 101" as brownbag sessions and for PraDev University.

Internship

Dormitel and CoLiving System, Corporate Technologies Inc. Oct. 2021 - Nov. 2021

- Helped with the development and improvements of CTI's reservation system for hotels and more.
- Suggested multiple points for technical and development improvements such as optimization and reduction of

unnecessary virtual overheads and allocations.

VaxRegister, Corporate Technologies Inc.

Sept. 2021 - Oct. 2021

- Solely developed from scratch a PWA (Progressive Web App) with QR Code Reader/Scanner capability for checking vaccination status of a user to be used in CTI malls and grounds.

Personal Projects (Open-source)

Going Home: Revisited

[GitHub Link](#)

- Developed an indie horror survival game available in Windows, Linux, and Android
- Technologies: Lua, LOVE, C++, Java, and Android NDK.

C-Choice Construction Supply

[GitHub Link](#)

- Developed XLSX-to-DB parser, fullstack web application for construction supply shopping.
- Technologies: Go, GRPC, SQLite3, Bash, XLSX, HTMX, Tailwind CSS.

Slab

[GitHub Link](#)

- Maintain and improve the inherited Slab, an immediate mode GUI toolkit for the LOVE framework
- Technologies: Lua.

LOVE Android Extensions

[GitHub Link](#)

- Maintain and implement Google features for the LOVE game framework such as AdMob and Play Services.
- Technologies: Lua, C++, Java, and Android NDK.

CodeNect: Visual Programming Software

[Link](#)

- The software of my thesis which is a real-time, node-based, visual programming language designed for beginners.
- Allows real-time viewing and generation of visual code to C code, simulation, debugging, and assessment mode for classroom-setting teachings.
- Supports fundamental programming features like data types and structures, arithmetic, IO, if-else, for-loops, and so on.
- Technologies: C++, C, TinyCC, Make.

Additional Experiences and Awards

SM Malls Online (2024) 2x People's Choice Award - Technical Lead and 2x Initiatives MVP

SM Malls Online (2023) Impact Player of the Year, 4x People's Choice Award - Backend Developer, 3x PROD Issues Champion for Developers, Support Champion July 2023, Special Awards - Code Red and Super Fan, and Every Department Award

SM Malls Online (2022) Impact Player of the Year and 3x Employee of the Sprint

Gawad Laya't Diwa (2022) Most Outstanding Student in Academics Information Technology

CvSU 3rd Annual Gawad Tigre (2021) Most Outstanding Student - Department of Information Technology and Most Outstanding Student - College of Engineering and Information Technology

I.T Olympics - University of Makati (2019) 2nd Place in .NET Programming

Technoton 2018 - Cavite State University (2018) 1st Place in Java Programming

Pinoy Teen Creates Pixel Art Horror Game (2017): GMA News Article about my indie game

Technologies

Languages: Go, Python, Lua, C, C++, Rust, Java, C#, SQL, JavaScript, TypeScript, Bash

Frameworks: FastAPI, Django, Tauri, Svelte, Echo, Gin, Vue, React, HTMX, Express

Software: Git, Vim, GNU/Linux (I use Arch btw), ZSH, TMUX, Postgres, MySQL, MongoDB, Jira

Cloud/Service: AWS Lambda, S3, SES, DynamoDB, SQS, EC2, EventBridge, API Gateway, Shopify, CircleCI, Snyk, Jenkins, Datadog

API: GRPC, GraphQL, REST
